

EXECUTIVE SUMMARY

Brazil E-Commerce

Revenue & Sales Performance Analysis

Power BI Portfolio Project | Multi-year Brazilian E-Commerce Dataset

Project Overview

Dataset	Multi-year Brazilian e-commerce data covering customer behaviour, product performance, payment trends, and regional sales distribution.
Scope	6 relational tables — Customer, Fact, Order, Payment, Product & Seller — linked via a data model in Power BI.
Tool	Power BI Desktop with Power Query (M language) for transformations and DAX for measures and KPIs.
Challenge	Raw data required significant cleaning and enrichment before any meaningful analysis or visualisation could begin.

Data Cleaning & Preparation

State Abbreviations

All Brazilian state codes (SP, RJ, MG etc.) were stored as abbreviations. A reference table was imported and merged in Power Query to replace every code with its full state name.

Portuguese Categories

Product categories were in Portuguese (Brazil's national language). A translation lookup table was imported and merged to convert all categories into readable English labels.

Duplicate Removal

Key columns; including order IDs and customer records were audited and cleaned to ensure no transactions were double-counted and skewing the KPI figures.

Validated & Modelled

After cleaning, all six tables were validated and connected via relationships in the Power BI data model before any DAX measures or visuals were built.

Key Metrics at a Glance

\$13.63M

Total Revenue

95,128

Total Customers

20%+

YoY Revenue Growth (2017 → 2018)

\$236.18

Avg Order Value — Voucher Users

Revenue & Sales Highlights

Credit card is the dominant payment method — 72,200+ orders generating \$10.56M in revenue, the single largest segment by every measure.

Voucher customers record the highest average order value at \$236.18 — nearly \$90 more per transaction than credit card users, making them a high-value, underserved segment.

Revenue grew from \$6.16M in 2017 to \$7.43M in 2018 — a 20%+ increase in both revenue and order volume year-on-year, signalling strong business momentum.

Top revenue-generating categories: Beauty & Health, Watches & Gifts, and Bed Table & Bath. Sports & Leisure leads in order volume but at a lower average price point.

Geographic Distribution

Revenue is heavily concentrated along Brazil's southeastern coastal corridor.

São Paulo & Rio de Janeiro

Dominant — highest revenue & order density

Southern States

Medium revenue — secondary market

Northern & Interior Regions

Low revenue — significant untapped potential

💡 Significant growth opportunity exists in the northern and interior regions which remain largely unserved by the current distribution and marketing network.

⚠ Revenue at risk

\$165.59K

Churn Risk Value

Conclusion & Opportunities

01

Expand Geographically

The north and interior of Brazil represent significant untapped revenue potential with virtually no current market penetration.

02

Increase Basket Size

At just 1.19 items per order, targeted bundling and cross-sell strategies could lift revenue without needing new customer acquisition.

03

Fix Last-Mile Delivery

The 9.28-day carrier-to-customer gap is where satisfaction and churn risk is being created. Reducing this directly addresses the \$165.59K churn exposure.

04

Target Voucher Segment

Voucher users have the highest average order value at \$236.18. A focused retention and upsell campaign could generate disproportionate revenue gains.
